Executive Security Report

Executive Summary

Total vulnerabilities: 0

Highbusiness risk issues: 0 and no direct businessimpacting security findings were identified in the scanned code

Overall risk level: Low

Technical Details

Finding 1 No codelevel security issues detected by static analysis

Severity: Low

AI Explanation: Bandit and Sonar did not return any security issues in the scanned project files, which suggests the code does not contain obvious common Python security antipatterns.

Fix Suggestion: Keep secure coding practices in place and add security checks to CI so future changes are scanned automatically.

Finding 2 Dependency scan could not be completed

Severity: Medium

AI Explanation: Safety could not run because the project does not include a requirements.txt file, so dependency risk was not assessed.

Fix Suggestion: Add and maintain a dependency manifest such as requirements.txt, then rerun dependency scanning.

Tool outcomes (Bandit, Sonar, Safety, ZAP):

Bandit: Succeeded — no findings reported.

Sonar: Succeeded — no issues reported.

Safety: Failed — no requirements.txt found in the project.

ZAP: Not run — target was a local code path, not a URL.

Tool Failures

Safety failed because the project folder does not contain a requirements.txt file.
