---

## Executive Security Report

---

### Executive Summary

Total vulnerabilities: 0 identified by static code analysis; 1 scan issue in dependency review due to missing requirements file

Highbase issues: 0; no highbase code findings were detected, so immediate business impact appears low

Overall risk level: Low

---

### Technical Details

#### Finding 1 Missing dependency manifest for Safety scan

Severity: Low

AI Explanation: The dependency scanner could not run because no requirements.txt was found in the project. This means thirdparty package risk could not be assessed from the available files.

Fix Suggestion: Add or point the scanner to the correct dependency manifest file, such as requirements.txt, pyproject.toml, or poetry.lock, then rerun dependency scanning.

#### Tool outcomes (Bandit, Sonar, Safety, ZAP):

Bandit: Succeeded — no issues found in /workspace/uploads/c7be3e21232c/server.py

Sonar: Succeeded — no issues found

Safety: Failed — no requirements.txt found in project

ZAP: Not run — target URL was not provided

#### Tool Failures

Safety scan could not execute because the project did not contain a requirements.txt file.
