Report ID: bbb1a53b

Executive Security Report

Executive Summary

Total vulnerabilities: 0

Highrisk issues: 0 and no material businessimpacting findings were identified in the scanned Python source

Overall risk level: Low

Technical Details

Finding 1 No actionable security issues detected in source scan

Severity: Low

AI Explanation: Static analysis of the provided Python file did not identify any Bandit or Sonar security issues. This suggests no obvious codelevel weaknesses in the scanned source.

Fix Suggestion: Continue secure coding practices, and add dependency tracking plus routine scans in CI/CD to catch future regressions.

Tool outcomes (Bandit, Sonar, Safety, ZAP):

Bandit: Succeeded — scanned /workspace/uploads/704086176943/server.py with 0 findings.

Sonar: Succeeded — returned 0 issues.

Safety: Failed — no requirements.txt found in the project, so dependency scanning could not be performed.

ZAP: Not run — no HTTP/HTTPS target URL was provided.

Tool Failures

Safety scan could not run because the project does not include a requirements.txt file.
